Preface

The international workshop entitled *New Trends in HERA Physics 2001* took place from 17 to 22 June 2001 at Ringberg Castle, which overlooks Lake Tegernsee in the foothills of the Bavarian Alps, one of the most picturesque locations to be found in the whole of Germany. The castle was built during the first half of the twentieth century by Duke Luitpold in Bavaria (Herzog Luitpold in Bayern), a member of the Wittelsbach family which ruled Bavaria over 800 years, and his friend Friedrich Attenhuber, an all-round artist, architect, and interior decorator. The castle is entirely their creation, from the massive Renaissance-inspired exterior right down to the fittings and furniture, which, in every detail, were designed by Attenhuber himself and executed by native craftsmen. Attenhuber also painted every single picture exhibited in the castle. He found his models in the farmhouses around Lake Tegernsee. The castle embodies all trends of art and styles which dominated the first half of last century, combined with local Alpine originality and the individual creative power of its constructors. According to the Duke's last will, the castle passed into the hands of the Max Planck Society after his death, in 1973. The castle was then transformed into a conference venue, where scientists can exchange their latest ideas and discuss problems with their colleagues from all over the world in beautiful surroundings and in a relaxed mountain atmosphere, high above the daily business activities.

This was the third event in a series of Ringberg workshops on HERA physics, which was started in 1997 and was continued in 1999. In fact, at the end of these workshops, many participants expressed the opinion that this was a successful endeavour to bring theorists and experimentalists together in order to interpret the latest HERA data, and that it would be useful to organize a follow-up workshop in the same spirit.

On the occasion of the 2001 Ringberg workshop, forty-one experts of elementary-particle physics, both theorists and experimentalists, from twenty-five universities and research institutions in fourteen countries congregated to present their latest results on the various aspects of HERA physics. Specifically, there were nineteen theorists and twenty-two experimentalists, the latter representing the H1, HERMES, and ZEUS collaborations at HERA. The topics included: proton structure function; polarized ep scattering; photon structure function; photoproduction of jets and prompt photons; final states in deep-inelastic scattering, with special emphasis on jet production, soft multiparticle production, power corrections, and instanton effects; heavy-flavour and charmonium production; elastic and diffractive ep scattering; and new physics at HERA. We hope that the high-energy-physics community will benefit from these proceedings, in which the ongoing efforts in understanding the nature of the strong interactions, with particular emphasis on HERA physics, are documented.

We wish to thank all our friends and colleagues who have contributed to these proceedings. We are indebted to the workshop secretary, Mrs. Rosita Jurgeleit, for her assistance before, during, and after the workshop and to Dr. Annette Holtkamp for her technical assistance in the editorial work. The costs for catering and lodging at Ringberg Castle and for the publication and dissemination of these proceedings were covered in equal parts by the Deutsches Elektronen-Synchrotron at Hamburg and the Max-Planck-Institut für Physik at Munich, which we gratefully acknowledge.

Hamburg, October 2001

G Grindhammer, B A Kniehl, G Kramer and W Ochs (Editors)

Participants

Bernard Andrieu	LPNHE Palaiseau	andrieu@in2p3.fr
Jochen Bartels	Hamburg U	bartels@x4u2.desy.de
Nicola Bianchi	INFN Frascati	bianchi@hermes.desy.de
Michiel Botje	NIKHEF Amsterdam	h24@nikhef.nl
Nick Brook	Bristol U	n.brook@bristol.ac.uk
Gerd Buschhorn	MPI Munich	gwb@mppmu.mpg.de
John Collins	Penn State U/Hamburg U	collins@phys.psu.edu
James Crittenden	DESY Hamburg/Bonn U	james.crittenden@desy.de
Mrinal Dasgupta	DESY Hamburg	dasgupta@mail.desy.de
Eddi de Wolf	Antwerpen U	edewolf@uia.ua.ac.be
Markus Diehl	DESY Hamburg	markus.diehl@desy.de
Nelly Gogitidze	LPI Moscow	nellyg@mail.desy.de
Krzysztof Golec-Biernat	Hamburg U	golec@mail.desy.de
Günter Grindhammer	MPI Munich	guenterg@desy.de
Hannes Jung	Lund U/DESY Hamburg	jung@mail.desy.de
Valery Khoze	Durham U	v.a.khoze@durham.ac.uk
Christian Kiesling	MPI Munich	cmk@mppmu.mpg.de
Michael Klasen	Hamburg U	klasen@mail.desy.de
Bernd Kniehl	Hamburg U	kniehl@mail.desy.de
Birger Koblitz	MPI Munich	koblitz@mail.desy.de
Gustav Kramer	Hamburg U	kramer@mail.desy.de
Maria Krawczyk	Warsaw U	krawczyk@fuw.edu.pl
Garry Levman	Toronto U	levman@physics.utoronto.ca
Ewelina Lobodzinska	Cracow U/DESY Hamburg	ewelina@mail.desy.de
Piet Mulders	NIKHEF Amsterdam	mulders@nat.vu.nl
Kunihiro Nagano	DESY Hamburg/KEK	nagano@mail.desy.de
Beate Naroska	Hamburg U	beate.naroska@desy.de
Wolfgang Ochs	MPI Munich	wwo@mppmu.mpg.de
Jan Olsson	DESY Hamburg	olsson@mail.desy.de
Björn Pötter	MPI Munich	poetter@mppmu.mpg.de
Ignacio Redondo	Madrid U	redondo@mail.desy.de
Ewald Reya	Dortmund U	reya@het.physik.uni-dortmund.de
Roberto Sacchi	Turin U	roberto.sacchi@desy.de
Fridger Schrempp	DESY Hamburg	fridger.schrempp@desy.de
Felix Sefkow	Zurich U	felix.sefkow@desy.de
Hubert Spiesberger	Mainz U	hspiesb@thep.physik.uni-mainz.de
Wu-Ki Tung	Michigan State U	tung@pa.msu.edu
Andreas Vogt	Leiden U	avogt@lorentz.leidenuniv.nl
Matthew Wing	Bristol U	wing@mail.desy.de
Zhiqing Zhang	LAL Orsay	zhangzq@lal.in2p3.fr
Lennart Zwirner	Hamburg U	zwirner@mail.desy.de

PROTON STRUCTURE

Andreas Vogt	Parton densities and structure functions at next-to-next-to-leading order and beyond
Kunihiro Nagano	Gluon distribution function $xg(x, Q^2)$ and the strong coupling constant $\alpha_s(M_Z^2)$ from the analysis of structure functions
Nelly Gogitidze	Determination of the longitudinal structure function F_L at HERA
Zhiqing Zhang	Structure functions at large x
Michiel Botje	Error estimates on parton density distributions
Nicola Bianchi	Single-spin azimuthal asymmetries at HERMES
Piet Mulders	Azimuthal asymmetries in semi-inclusive leptoproduction
Ewald Reya	Polarized structure functions

PHOTON STRUCTURE AND PHOTOPRODUCTION

Bernard Andrieu	Photoproduction of jets, prompt photons, and photon structure
Maria Krawczyk	Photoproduction of isolated photons at HERA in NLO QCD

FINAL STATES IN DEEP-INELASTIC SCATTERING

Matthew Wing	Jets in deep-inelastic scattering at HERA
Björn Pötter	Jet production at HERA
Nick Brook	Soft particle production in deep inelastic scattering
Valery Khoze	Theory of multiparticle production in the soft region
Mrinal Dasgupta	Power corrections in QCD
Fridger Schrempp	Tracking QCD-instantons
Birger Koblitz	A search for instantons at HERA

HEAVY-FLAVOUR PRODUCTION

Ignacio Redondo	Open charm production at HERA
Felix Sefkow	Open beauty production
Hannes Jung	Unintegrated parton densities applied to heavy quark production in the CCFM approach
Wu-Ki Tung	Open heavy flavor production — conceptual framework and implementation issues
Beate Naroska	Production of J/ψ mesons at HERA
Lennart Zwirner	J/Ψ production in deep inelastic electron scattering at HERA

ELASTIC AND DIFFRACTIVE ep SCATTERING

Eddi de Wolf	Diffraction at HERA
Jochen Bartels	Theory of diffractive structure functions
Krzysztof Golec-Biernat	Saturation and geometric scaling in DIS at small x
John Collins	Factorization in hard diffraction
Garry Levman	Leading nucleon production at HERA and the structure of the pion
Michael Klasen	The pion structure function and jet production in $\gamma p \to nX$
James Crittenden	Experimental results on the diffractive production of light vector mesons
Ewelina Lobodzinska	The DVCS measurement at HERA
Markus Diehl	Elastic meson production and Compton scattering

NEW PHYSICS AT HERA

Roberto Sacchi	Searches for physics beyond the Standard Model at HERA
Hubert Spiesberger	Physics at high Q^2 with HERA II
