

Preface

The 2nd International Symposium on Power Electronics and Control Engineering (ISPECE 2019), co-organized by the School of Information Science and Engineering of Dalian Polytechnic University and the International Academic Exchange Professional Committee of Guangdong Human Resources Research Association, was successfully held in Tianjin, China during Nov. 22-24, 2019. This conference aims to build a platform for experts and scholars in the field of power electronics and control engineering to share their research results and challenges, and encourage them to cooperate and achieve more breakthrough results.

The First International Symposium on Power Electronics and Control Engineering was held in Xi'an during Dec. 28-30, 2018. The accepted papers selected from the conference has already been published by Journal of Physics: Conference Series (JPCS), and indexed by EI and Scopus. The main purpose of the 2nd International Symposium on Power Electronics and Control Engineering is to provide a platform for the scholars, technicians and researchers in the field of power electronics and control engineering to share research achievements and advanced technology, learn the latest trend of academic development, broaden the research thinking, strengthen the academic research and study, and promote the industrialization of academic achievements.

All papers submitted at the conference have been through rigorous review and process by the conference committee, and a volume of high-quality papers were selected for oral presentation and publication at the conference. We hope these books will serve as a reference for readers.

We would like to thank the conference committee for reviewing the papers impartially and responsibly. We also want to thank everyone and related institutions for their support and help. We sincerely hope the 2nd International Symposium on Power Electronics and Control Engineering will become an excellent forum, and we are convinced that the proceedings of this conference will be an important study reference and knowledge source, which can not only promote the progress of science and engineering, but also boost the development of other new products and processes.
